

OREFEJO ADEPEJU

Cicerostraße, Berlin-Charlottenburg-Wilmersdorf, Germany | +491783205994 | adepeju.kayode@gmail.com | <https://www.linkedin.com/in/adepeju-orefejo> | <https://adepejuorefejo.com> | <https://github.com/adepeju4>

PROFESSIONAL SUMMARY

Senior Software Engineer based in Berlin with 5+ years of experience building full-stack applications and applied machine learning systems. Depth in TypeScript, React, Node.js, and Python, with particular experience in data-heavy products, payment systems, and AI-integrated features. MSc in Software Engineering.

WORK EXPERIENCE

Creator Co.

Remote, Canada

Fullstack Developer (Contract) — TypeScript / React / Node.js

Sep 2025 - Present

- Led the architectural redesign and migration of the legacy frontend codebase into a more scalable, maintainable structure (Q4 2025), improving delivery velocity on subsequent sprints.
- Implemented context serialisation on the frontend for the platform's Model Context Protocol (MCP) integration, structuring application data sent to MCP servers to enable real-time AI prompt enhancement and personalised responses.
- Reduced perceived latency of LLM responses through frontend streaming and caching strategies, improving responsiveness in AI-driven features by roughly 30%.

HerPro App

Remote, Nigeria

Senior Backend Developer — Node.js / TypeScript / Socket.IO

Jun 2025 - Sep 2025

- Redesigned a multi-sided marketplace platform architecture, delivering a 3x faster onboarding process and seamless multi-role authentication and profile management.
- Shipped a real-time communication and notification system using [Socket.IO](#), enabling instant updates across 30+ event types via push and email delivery, lifting user engagement and platform interactivity.
- Integrated a robust payment and wallet infrastructure with Paystack, cutting manual reconciliation by 80% and ensuring error-free financial transactions.
- Delivered a dual-order system bridging restaurant food delivery and product e-commerce (cart management, order tracking, rider assignment, geospatial tracking), driving a 25% increase in successful order completions.
- Architected robust error handling infrastructure with centralised logging and automated recovery mechanisms, ensuring consistent system availability and full compliance with financial and data integrity standards.

Sveltekit · OS Labs

Remote, United States

Software Engineer

Mar 2022 - Mar 2024

- Built the Chrome DevTools panel using Manifest V3, enabling component-level segmentation and real-time debugging for Svelte applications.
- Designed prop and state diagramming features that improved visibility into component relationships and execution flow.
- Refactored Chrome Runtime API and proxy object communication, improving real-time message transmission between DevTools and target applications.

SynthAlly

Lagos, Nigeria

Software Engineer — Node.js / PostgreSQL / AWS

Apr 2023 - Nov 2023

- Constructed Node.js microservices with Express handling hundreds of daily HTTP requests, refining memory allocation to elevate server performance by 20%.
- Deployed and managed AWS cloud infrastructure (EC2, S3, Lambda) with Docker containers, delivering scalable and cost-efficient services across staging and production environments.
- Built a responsive React/Tailwind/Redux single-page application enabling users to discover and navigate events based on geolocation, with a mobile-first, component-reuse design approach.

Salesbeat

Remote, UK

Software Engineer — React / TypeScript / GraphQL

Apr 2022 - Oct 2022

- Developed React and TypeScript applications integrating GraphQL for declarative data handling, improving API efficiency by 35% and enhancing front-end performance and maintainability.
- Architected and implemented a high-performance NoSQL database solution, capable of processing thousands of data points per day, achieving a 40% reduction in query response time and enabling real-time analytics for faster business insights.
- Engineered a cost-efficient, scalable serverless architecture leveraging AWS Lambda, which cut server infrastructure costs by 30% while maintaining real-time data processing capabilities under variable workloads.

Cloudnimi

Lagos, Nigeria

- Engineered Node.js APIs, reducing data latency by 50% and significantly improving response times for the plugin platform's client-side and core database interactions.
- Built optimised API calls using custom hooks, reducing integration time and data retrieval latency across the platform.
- Authored technical documentation identifying performance optimisation areas and collaborated across frontend and backend teams to ship improvements.

PROJECTS

Emotion Detection for Autism Support

Nov 2024 - Sep 2025

- Developed and trained convolutional neural networks (CNNs) for facial emotion recognition, optimising model performance for autism support applications, which enhanced emotional response detection accuracy by 35%.
- Attained high classification accuracy on FER2013, CK+, and AffectNet datasets, validating the model's robustness and reliability in real-world emotion recognition scenarios.
- Applied D3.js data visualisation techniques, creating Sunburst charts to represent a "reel of emotions", enabling intuitive visualisation of emotional states and improving data clarity for researchers and developers by 40%

EDUCATION

Euclea Business School,

France, Europe

M.Sc., Software Engineering

Mar 2025

TECHNICAL SKILLS

- Programming Languages: JavaScript (ES6), TypeScript, Python, Ruby, SQL, HTML, CSS, and Linux Operating System.
- Libraries & Frameworks: React, Next.js, Svelte, Redux, Node.js, Express, Flask, D3.js, GraphQL.
- Tools: Docker, Kubernetes, AWS (S3, Lambda, CloudWatch, API Gateway, EC2, Elastic Beanstalk), Jenkins, GitHub Actions, Travis CI, Webpack, Vite, Chrome Web Extension.
- Databases: MongoDB, PostgreSQL, SQL. Security: JWT, bcrypt.
